

PROJECT REPORT

Description of the Project:

The main motto of the project is to create a web-app like Facebook, Instagram etc .which gives the features like creating ,updating and deleting posts for the user

User Requirements:

- Python3, Django should be installed in the user's machine

External Packages Used:

- Django-Framework
- PIL (Python Image Library)

Technologies:

- Python3
- HTML
- CSS
- Bootstrap
- Some basic JavaScript

Key Concepts Involved:

- Routing
- Working with the admin page
- Template Inheritance
- Working with Databases
- Login and Registration forms
- Creating, Updating, Deleting a Posts
- Pagination

Design and Implementation:

- There is a navigation bar at the top of the page which contains the Login, Register urls
 - Once logged in you can see the profile,logout urls in the navigation bar which shows the profile of the user logged in
 - If the user is log in will have the create post option in the navigation bar
-
